DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 to 6, 10 to 16, 18 to 20, and 39, drawn to a method and apparatus for reconstructing voice information from a plurality of voice samples by determining a loss of a packet, wherein an attenuation factor increases with each subsequent packet loss, classified in class 704, subclass 228.
 - II. Claims 7, 21 to 25, 27 to 34, 36 to 38, and 40 to 41, drawn to a method and apparatus for reconstructing voice information from a plurality of voice samples by determining a loss of a packet, wherein a voice parameter is received in a first packet and voice samples are received in a second packet separate from the first packet, classified in class 714, subclass 822.
 - III. Claim 9, drawn to a method for reconstructing voice information from a plurality of voice samples by determining a loss of a packet, wherein a silence interval is determined, a start point in a buffer is determined that is one or more integer pitch periods before the beginning of the silence interval, and voice samples are copied from the buffer beginning at the start point, classified in class 704, subclass 210.

2. Claim 18 links Inventions I and III. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim, claim 18. Upon the allowance of the linking claim, the restriction requirement as to the linked inventions shall be withdrawn and any claims depending from or otherwise including all the limitations of the allowable linking claim will be entitled to examination in the instant application. Applicants are advised that if any such claims depending from or including all the limitations of the allowable linking claim is presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

3. Claims 28, 37, and 41 link Inventions II and III. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claims, claims 28, 37, and 41. Upon the allowance of the linking claims, the restriction requirement as to the linked inventions shall be withdrawn and any claims depending from or otherwise including all the limitations of the allowable linking claims will be entitled to examination in the instant application. Applicants are advised that if any such claims depending from or including all the limitations of the allowable linking claims are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction

requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

The inventions are distinct, each from the other because of the following reasons:

4. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, Invention I has separate utility such as for a speech coder with a forgetting attenuation factor to provide more weight to the most recent speech samples. See MPEP § 806.05(d).
5. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, Invention II has separate utility such as for a speech coder that provides differential coding of packets on a packet-to-packet basis. See MPEP § 806.05(d).
6. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, Invention III has separate utility such as for a speech coder for determining a silence interval with a voice activity detector (VAD). See MPEP § 806.05(d).

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

8. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicants are advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
